Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

User: IT Procurement Team Member

SAYS	**THINKS**
• "The laptop configuration task should be created automatically." • "The Hardware team should receive the task after approval." • "The procurement process needs to be more streamlined." • "The standard laptop request should be handled quickly."	• "Manual processing may cause delays or mistakes." • "The laptop should be configured before the user has to wait." • "Automation can reduce unnecessary manual work." • "Better task allocation will help the IT team work efficiently."
DOES	**FEELS**
• Places standard laptop requests through the Service Catalog. • Processes and monitors the request and approval. • Checks the requested item and catalog task. • Uses Flow Designer to automate task creation and assignment. • Assigns configuration tasks to the Hardware group through automation.	• Frustrated when configuration is delayed or overlooked. • Concerned about manual errors and delays. • Relieved when tasks are automatically generated. • Satisfied when laptops are configured promptly. • More confident in a streamlined procurement process.

PAINS

• Manual intervention creates additional workload.

• Configuration can be overlooked or delayed.

• Users may have to wait longer for their laptops.

• Inefficient task allocation can affect IT resources.

• Manual processes can lead to potential errors.

GAINS

• Automatic creation of catalog tasks.

• Automatic assignment to the Hardware group.

• Faster laptop configuration after approval.

• Reduced manual intervention and errors.

• Better resource utilisation.

• Improved productivity and user experience.
