Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. User

The user accesses the ServiceNow Service Catalog and selects the **Standard Laptop** option to place a laptop request.

2. Service Catalog

The Service Catalog provides the interface for placing the Standard Laptop request and viewing the request status.

3. Approval Process

The submitted request is sent for approval. Once the request is approved, the automation process is triggered.

4. Flow Designer

Flow Designer acts as the **automation layer**. It detects the approved Service Catalog request and automatically creates a Catalog Task.

5. Catalog Task

A Catalog Task is created with:

- Short Description: **Laptop need to Configured**
- Description: **Laptop need to Configured**
- Approval: **Approved**
- Assignment Group: **Hardware**

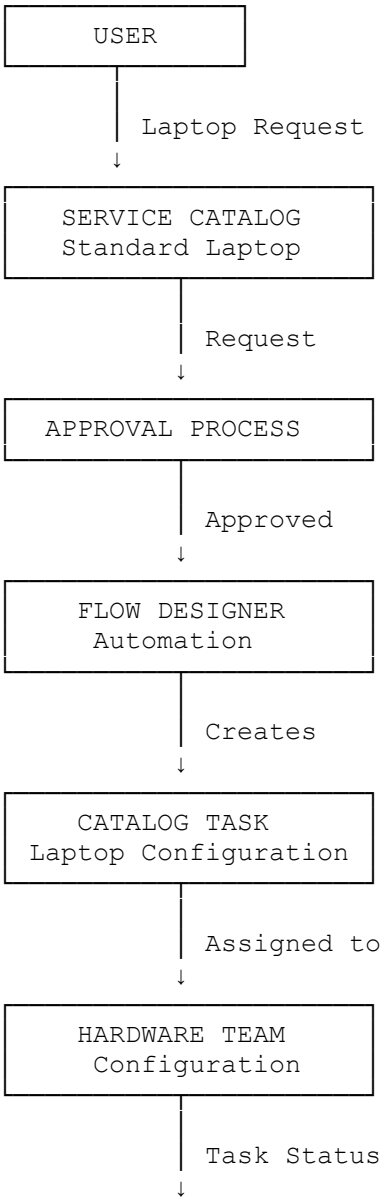

6. Hardware Team

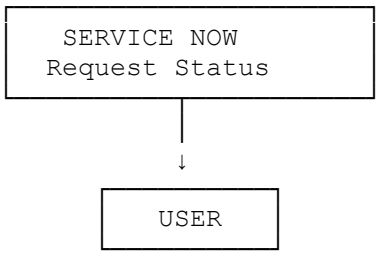

The automatically created task is assigned to the **Hardware** group. The hardware team can then configure the laptop.

7. Status Tracking

The user can view the request, approval information, and Catalog Task status through ServiceNow.

Architecture Flow

Project Design

Input: Standard Laptop Request
↓
Service Catalog: Request is submitted
↓
Approval: Request is approved
↓
Automation: Flow Designer creates Catalog Task
↓
Task Assignment: Task assigned to Hardware group
↓
Configuration: Hardware team configures the laptop
↓
Output: Configured laptop and updated request status

The project is designed to reduce manual intervention, automate task creation and assignment, and ensure laptops are configured promptly after approval.
