Team ID	SWTID-2026-1971
Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

2. Introduction

The project focuses on improving the standard laptop procurement process by introducing automation through **ServiceNow Flow Designer**. The existing process involves manual work and can cause delays, particularly when laptops require configuration. The proposed solution automatically creates and assigns a configuration task after the service request is approved.

3. Problem Statement

The existing IT procurement process lacks sufficient automation and efficiency. Standard laptop requests may require configuration, but this step can be overlooked or delayed. This results in increased manual work, longer user waiting times, and inefficient allocation of IT resources.

4. User Story

As a member of the IT procurement team, the requirement is to streamline standard laptop ordering so that configuration tasks are automatically generated and assigned to the Hardware team. This helps ensure that laptops are configured promptly and reduces manual intervention.

5. Project Objectives

The main objectives are:

- Provide a seamless experience for users requesting standard laptops.
- Ensure timely laptop configuration.
- Reduce manual intervention and possible errors.
- Improve resource utilization through optimized task allocation.
- Increase efficiency and productivity in IT procurement operations.

6. Proposed Solution

The proposed solution uses **ServiceNow Flow Designer** to automate the laptop procurement workflow.

After a Standard Laptop request is approved, the flow automatically creates a Catalog Task. The task is configured with the required laptop configuration description and assigned to the **Hardware** group.

7. System Workflow

User → Standard Laptop Request → Approval → Flow Designer → Catalog Task Creation → Hardware Group Assignment → Laptop Configuration → Status Tracking

The Standard Laptop service is accessed through the Service Catalog, where the user selects **Order Now** to place the request. After approval, the Requested Item and its Catalog Task can be accessed to verify the task details and assignment.

8. Project Implementation

Milestone 1 – Flow Creation

- Create a new Flow in Flow Designer.
- Name the flow **Standard Laptop Task**.
- Select the Service Catalog trigger.
- Add the **Create Catalog Task** action.
- Set the task description.
- Set the Assignment Group to **Hardware**.
- Set the Approval value to **Approved**.
- Save and activate the flow.

Milestone 2 – Flow Assignment

- Open the Standard Laptop service catalog item.
- Access the Process Engine.
- Remove the existing unnecessary automations.
- Add the **Standard Laptop Task** flow.
- Save the configuration.

Milestone 3 – Service Catalog

- Open the Service Catalog.
- Select Hardware.
- Select Standard Laptop.
- Click **Order Now**.
- View the request and approval information.
- Open the Requested Item and Catalog Tasks sections.
- Verify the updated task status and assigned group.

9. Testing

The project workflow can be tested by placing a Standard Laptop request, checking the approval process, and verifying that the automated Catalog Task is created after approval. The task should contain the required description and be assigned to the Hardware group.

The final verification involves checking the Catalog Tasks section for the updated status, short description, and assigned group.

10. Expected Benefits

- Reduced manual intervention.
- Faster laptop configuration.
- Reduced user waiting time.
- Automatic task creation.
- Automatic assignment to the Hardware team.
- Improved resource allocation.
- Better efficiency in IT procurement.
- Improved user experience.

11. Conclusion

The project provides an automated workflow for standard laptop procurement using **ServiceNow Flow Designer**. By automatically creating and assigning configuration tasks after approval, the process reduces manual overhead and helps ensure timely laptop configuration. The solution also improves resource utilization and provides a more efficient procurement experience for users.
