Project Testing

Date	29-09-2026
Team ID	SWTID-2026-1971
Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Testing Objectives

- Verify that the **Standard Laptop** request can be placed successfully through the Service Catalog.
- Verify that the request approval process works correctly.
- Check that the **Flow Designer** is triggered after the request is approved.
- Verify that a **Catalog Task** is created automatically.
- Check that the task contains the correct description and approval details.
- Verify that the task is assigned to the **Hardware** group.
- Verify that the request and Catalog Task status are updated correctly.
- Ensure that the complete workflow reduces manual intervention and delays.

Test Cases

Test Case	Test Scenario	Expected Result
TC01	Open Service Catalog and select Standard Laptop	Standard Laptop option should be available
TC02	Click Order Now	Laptop request should be created
TC03	Open the request and check Approvers	Approval information should be displayed
TC04	Approve the request	Request should be approved
TC05	Check the Requested Item after approval	Requested Item should be available
TC06	Check Catalog Tasks	Catalog Task should be automatically created
TC07	Check task description	Description should show Laptop need to Configured
TC08	Check Assignment Group	Task should be assigned to Hardware
TC09	Check task status	Updated task status should be displayed
TC10	Verify the complete workflow	Request should move successfully from request → approval → task creation → hardware assignment

Testing Outcome

The project is considered successfully tested when the Standard Laptop request moves through the complete automated workflow, from placing the request and obtaining approval to automatic Catalog Task creation and Hardware group assignment. The document demonstrates these final checks through the Requested Item and Catalog Tasks sections.
